Linking curriculum learning to careers

Bring Learning  
To Life

## MARINE BIOLOGY WORKSHOP

**Duration: 1hr 15mins From £99**

Our workshops focus on routes into marine biology and also what careers are available to students wanting to study this field. We also look at the impact plastic pollution is having on the marine environment and work with students to come up with ideas to make a change in your school. We introduce the idea of eco-bricking and demonstrate ways to make your school more eco-friendly. Students will design campaigns which can be run throughout the year in their schools and will learn more about the opportunities we offer on our school trips to South Africa.

*"The workshop was very interesting and thought-provoking, the students left feeling inspired to find out more about Marine Biology and conservation. They may learn about it in science lessons but to actually meet someone who is working in that field is invaluable."*

**Head of Science,  
Leicestershire**

*"An amazing workshop that was received really positively by our students. It has inspired our lower school students to form an eco-bricking club for the plastic that can't be recycled"*

**Deputy Head,  
Lancashire**
